Title: A Mathematical Study of Software Testing Regarding Computer Measurements

Author: Suman Lata, Navita, Dr. Pardeep Goel

Abstract: The paper explains the mathematical study of software testing and the measurement regarding software. Here we explain the planning regarding software testing and the metrics regarding software testing. Also the different attributes for the software test planning are discussed in this paper. The benefits of measurement in software testing are explained in detail here. This paper shows that the software measurement is the prime portion in the software testing.

Keywords: Software Testing, Software Measurement, Software Metrics, Software Testing Attributes.
